03/29/2012 05:03 PM

Project: Ground-Water Investigation in Pavillion, Wyoming, QA ID #G-14478

This email is to document a change of the preservative to be used for the VOC samples to be submitted to the R8 lab for the sampling event in April 2012. Currently QAPPv6 states that TSP will be used. Instead of TSP the preservative to be used will be HCl to a pH<2.
